Open it on workbench... wtf!==(?!? :))))

I love the fact on Amiga to open a big program like a browser or a graphic program like art effect on a custom screen, give me order, but they are personal prefs 😊

Seriously a good 21th browser should have:

- tabs, because they give order to opened web pages; (usability feature, very important)
- Speed links which can be visualized in any part of browser window (like IBrowse);(usability feature, very important)
- Bookmark on menu (like IBrowse, but much enhanced);(usability feature, very important)
- source of current web page visualizer;
- bookmark manager;
- cache manager;
- download manager;
- history of latest visited web pages on menu;
- open of local files;
- save a web page/web site;
- search engine;
- progress bar/lamp indicators (feedback to user);
- c&p; (usability feature, very important)
- d&d;
- it have to respect Amiga style guide where it's valid yet; (usability feature, very important)

Without all these features we have not a browser, but olny a visualizer web page engine...

Usability features are a very important piece of a software and make it a good software...
