@Chris

Just downloaded and installed the beta version of NetSurf on my M-A1-C. My initial impressions are very favorable.

As others have suggested I would like the option of opening Netsurf on the WB screen. The M-A1C-s onboard gfx card does not have a lot of video RAM spare when OS4.1 loads up (composition ON), especially on my 1680x1050 22" WS monitor. Opening NetSurf on its own screen completely eats up all the remaining gfx memory.

I can confirm that it also works with a 16bit display (I can't really use a 32bit display with compositing switched ON - actually I can, but I soon run out of gfx memory on the M-A1-C.

Also as others have reported, with NetSurf running the CPU activity is registers 100%.

Other than that a very good start. Well done.
