AOS4 graphics update is slower now

I wonder if this happens only here.

After the update, as soon as I moved a window for the first time, I noticed a major slowdown. I hoped it was just an impression, but then I had to accept that it was not so: window moving and resizing \*are\* less smooth. The perception of the slowdown is strong.

For a more objective test, I used a proggy I've created in 2004 which performs various graphical operations: a particular test dropped from ~316 fps to ~260 fps.

I have a RADEON 9000 card, with the following monitor settings:

BOARDTYPE=Radeon

CMLENGTH=6

(CHIPTYPE=ATIRadeon.chip)

(BORDERBLANK=Yes)

(BIGSPRITE=Yes)

SOFTSPRITE=No

IGNOREMASK=Yes

(DISPLAYCHAIN=Yes)

FAKENATIVEMODES=No

INTERRUPT=Yes

VSYNCMIN=60

VSYNCMAX=85

HSYNCMIN=31500

HSYNCMAX=64000

SETTINGSFILE=ENVARC:Sys/P96.prefs

(setting INTERRUPT=No makes things a little slower)

The update causes no other problem whatsoever (apart from some compatibility issue with Personal Paint which I still have to investigate further).

Any idea anybody?
