[SOLVED] Deflcons : mount iso with DiskImageGUI

Hi All,

I am trying to mount automagically iso images with the help of deflcons and DiskImageGUI (which is a great program BTW!).

the problem I am facing is that deflcons does not seem to understand arguments passed to the program like "mountdiskimage drive icd0:".

instead I have to toggle the option "ask argument" and manually add ICD0: to the command line.

Is there a way to do it more automatically ?
