JXFS is several times faster than SFS and about ten times faster than FFS2 in Write operations (probably less than ten times faster for Reads). It is a journaling filesystem, so it is self-repairing.

JXFS has been in beta test and released to the public now for several years and is as stable as a rock.

JXFS is likely to become the new standard for AOS once someone gets the time to add boot support for it to SLB.
