I'm still using FFS, but I need to switch. I've had two scary moments in the last few weeks (yes I have backups), but partition wizard (included with the OS) sorted things out after a bit of playing around.

I'm wanting to make the switch to JXFS or SFS, but have never had the confidence to move over. With the problems I've had in the last couple of weeks I think it's now time to switch.. .. but to which one!

Cheers,
Bean.
