allright... i found the problem (and a solution 😊)

i have a partition which holds the os/workbench called WorkBench:
all my other programs are on a separate partition called "Programs:"

this also includes some of the "system" paths like fonts: and libs:.

all my additional fonts are in Programs:Fonts and the FONTS: assign is set to

Assign FONTS: Programs:Fonts SYS:Fonts

so that "my" fonts directory is the one where files are copied to when doing a "copy xxx to FONTS:"

the same goes for libs:.

and this is the problem - warp3d does **not** work, if the libs are not placed in the "first" of the assigns.
so i just copied them from SYS:LIBS to Programs:LIBS and now it all works fine.

strange...

byebye...
