and compare to the freely 2.4 version, there is os4depot added to the amigaos4.0 final version !

I just added that to my registered 2.4. For anybody that haven't found out how:

Open the settings, go to the User Interface part and select the URL Toolbar page. Add a new entry named OS4Depot and set the URL field to (without the quotes):

"http://os4depot.net/index.php?function=search&tool=simple&f_fields=%s"

And Orgin's your uncle ...

Best regards,

Niels
