Yes, I know K-L and also would like to give the advice to all that rarely SFS could cause problem and don't forget to backup from time to time 😊

The problem arrive on the Caches: partition (1go) with caches from lbrowse and more than 100mo of no important files.

This is great because I just reformat the partition and copy over.

This error came after less than one year of using the SAM and for sure lbrowse could sometime do this kind of error apparently.

The only point is that never arrive on my classic during the last 10 years (on the caches: partition of the classic) and only one time on the boot partition on the classic, only.

This is too bad finally, for newbies of AOS4, that not have the rule to sometime do backup to, if really no chance, to lost datas if using SFS on their SAMS. At least a minimal tool for repairing SFS for AOS4 will be greatly appreciated IMHO.
