@Denil

the error came on a HD with less than one year old.

surprising me because SFS said the error and said (on the requester): - retry or - no more requester.

With no more requester, I have continued to do things normally but know the fact that there are errors on the HD.

Copy over the file to another partition give me 2 drawers with errors (IB tree errors) and also 2 files (external archive datas) with errors. I have formatted and copy over the datas and all is fine again.

also, when making a wb/disk/informations and calculate the size, The same SFS error came that could show to the user a method to check if errors or not on the HD.

ALso, I have downloaded the original SFS archive and no SFS AOS4 tools. that mean no SFScheck or setcache available in AOS4 .exe.
