Help: Can't get TuneNet v0.92.56 to work from shell

URL:

Does TuneNet v0.92.44 work for anyone else from the Shell?

When I type:

APPDIR:Tunenet mysong.mp3

The proper version of Tunenet starts up but the song never plays.

When I type:

APPDIR:Tunenet -nogui mysong.mp3

I can see Tunenet startup in "Ranger" but then it immediately shuts down.

The mp3 plays fine if I load it from the GUI. Any ideas?

Just a little note about the version number.

In the about the version number shows as v0.92.44 while in the icon it shows as .9924 (no "." between the 9 and 2).

By the way, very nice update! I now use Tunenet in a subdoc! Thanks Bean!
