Here is another one for you bean.

When I try to play a .mp3 song located on the internet it plays the first 2 or 3 seconds then quits playing. MPlayer plays it just fine. Here's the command line I'm using. Am I doing something wrong?

appdir:TuneNet -stream http://home.comcast.net/~ktadd/Sample_Files/Audio/ChasingCars.mp3

It should play for about 20-30 seconds. Give it a try.

I also noticed that once I try to play it with Tunenet, then MPlayer won't play it at all. Sorry to be a pain. I test software for a living so breaking things comes naturally to me. 😊
