@Thread

I checked the following today (all work):

Packard Bell Store&Save External HD 320GB

Memorex Travel Drive 4GB USB Stick

Integral 8 in 1 Memory Card Reader

&#128;@Kicko

Not happy to see if they just got recognized (and reading about your problems) I moved several files from and toward them, deleted them etc.

All worked fine no filename's corruption.

By the way, the memCard reader works best on AmigaOS IMHO, on Windows it starts scanning all the available slots and mounts each one of them as an additional systems drive (even if they are empty) I once brought it to friend that had a very slow Dell Laptop (an old PIII) and it took forever before the card was accessible. On AOS the memory card was immediately accessible after a split second!
