@Mrodfr

thats what I do with my Lacie 2.5" 80Gb.

I realized that the more datas it has, the more power it needs so in the ned I had to plug the second usb cable to give more power, an this was not needed at all when the drive was empty !

you realize this when, after plugging, it makes a little noise like if your disk was corrupted and it is trying to find a good block o start !
