Not everyone have corruption problems like me, you and mikey_c. I dont know if its hardware dependent or the filesystem but i would like to have it working. Maybe there is a way to test these stuff with the developers in hope to fix it to work. But maybe they know and have tested and cant get it to work. I dont know. Not much info so i feel helpless.

Anyway you can put up this usb sticks as working even if i get corruption as they are showing in workbench as they would probably work with people that have not corrupted filenames when copying.

ScanDisc 4gb

Sony VAIO 4gb

Kingston Datatraveler 8gb

Kingston Datatraveler 16gb
