see the link I have made on my post #28 and see other users with this problem and also some supposed explanations.

softlink, characters on the filename,.....

Of course, happen on my SAM.....verry often.. 😞

NOTE: on my tests (see my link) I have one time copied the workbench content on a FAT32 key.

When crash came, on WORKBENCH: was one txt file (a crashlog).

After the crash, the crashlog content replaced all the name of the filename inside the FAT32 media.
