Yes, it does. Remove the DataType plugin for now, it'll be updated soon.

@bean

xmp\_init gets called from InitPlayer and TestPlayer, there is no difference between them. I don't see why it was working, and now it doesn't, hence my desire to wait for the new plugin SDK before doing anything - I might be able to restructure it.

Incidentally the code was based on my DataType plugin which, as Snuffy notes, crashes similarly when TuneNet starts up. So whatever fixes that might fix the XMP one 😊
