Constellation Lines - since OS4.1 update

URL:

HI,

Can users of Digital Universe who have OS4.1 update 1 please confirm a problem I have found when drawing constellation lines at the left hand edge of the screen.

It affects all versions of DU so any version from 1.5 will do, no one needs the current beta 1.7 to test this.

For example set the time to 2010/02/26 11:00:00

it will not have to be exact.

Then using the control panel set the following:

Field: 36:00:00.00

RA: 03:30:00.00

Dec: 08:45:00.00

The lines in Taurus do not display correctly, one is missing entirely, the other truncates before reaching the edge of the screen and points in the wrong direction.

Note this affect only happens at the left egde of the screen.

Going back to OS4.1 pre-update or OS4.0, and using the appropriate Kickstart files each time, the constellation lines draw as they should and always have done before the new update.

Can anyone else confirm any oddities they have seen since installing the OS4.1 update.

I am currently suspecting the graphics.library.kmod file as temporarily replacing it with the old one seemed to work but I do not want to really mix and match Kickstart files permanently.

Bill.
