@BillE

email with a grab send. i hope it will help.

Thanks it certainly did.

Your grab shows nothing untoward at all, it is exactly as it should be. As you use a SAM it looks as if the kickstart module that I think is the cause, will not be the same on the SAM as it is on the A1, and it appears your ATIRadeon.chip file works for the SAM with no corruption problems.

[Edit]

See the thread at http://www.amigans.net/modules/newbb/...hp?topic_id=3669&forum=25

for the suspicion of the ATIRadeon.chip file, but it seems my assumption that they would be different for A1 and SAM is incorrect, so you /should/ be getting the corruption too ???

Bill.
