Hi,

Quote:

Is it possible to turn it off all the time or do i have to turn it off every time wb has started??

To disable it fully you'll have to remove the RinghioServer from startup using the WBStartup preferences.

To disable just TuneNet's messages launch the Notifications Prefs and untick TuneNet (and TuneNetDock) from the list of Applications. Just remember to turn it back on again when the Notification system is updated if you want TuneNet tune messages again.

Cheers,
Bean.
