Hello,

Thanks a lot for this verry great version 😊

All is perfect but for improving the program again (and because I have allways some place available on this post 😊), just this little point:

- Internet radio and search a radio by a word. found the radio and listen and make an iconify/desiconify and the search is lost and the list of the internet radio don't even show the radio listening previously (just before the iconify).

It's a little detail I know 😊
