Hiya, Oh yes, I just noticed that without a full path in front of the song it doesn't load. D'oh! 🤔

For example:

Appdir:tunenet 02_Frankenstein.mp3

....won't play the song

appdir:tunenet mp3:02_Frankenstein.mp3

...will work.

I must have broken something prior to release.

I've produced an update which fixes some minor niggles, I'll include in it the fix for this as well.

Has this been fixed in TuneNet 0.92.56?

I still can't seem to get it to work from the shell. Either playing a file in my drive or streaming for the internet.

Can anyone get this clip to play when from the commandline with TuneNet?
