Has this been fixed in TuneNet 0.92.56?

I still can't seem to get it to work from the shell. Either playing a file in my drive or streaming for the internet.

Hi,

I was sure I fixed the CLI file reference problem and just tried the following:

```
appdir:tunenet 02_Frankenstein.mp3
appdir:tunenet -nogui 02_Frankenstein.mp3
tn:bin/TuneNet MOD/2_Dragonsfunk.mod
```

..and that worked.

However, that said I just noticed that I still have a reference problem if TuneNet is already loaded in the background - sigh..

The stream issue is something else though. I can play that link through the Interface, but not from CLI. I'll look into this now.

-- **EDIT** -- Both issues now resolved - I'll release a patch for people to test.

Cheers,
Bean.
