There is a patch here. It is just the exe, so you'll need to install it on top of the older release.

<http://www.tunenet.co.uk/download/TN09258.lha>

Please can you let me know if it solves the two issues mentioned above?

Ok, I've been checking this out tonight. This version streams audio files fine from the shell. I tried several different file types. Thanks!

One more question though. Does TuneNet have the ability to stream playlist on the internet?

For example:

<http://www.panix.com/web/faq/multimedia/sample.m3u>

This link can be found towards the bottom of this page:
