I have done some more tests, and the error occur on the RAM-disk only.

On these filesystems, renaming works ok:

- FastFileSystem 53.2 (DOS1)
- SmartFilesystem 1.286 (SFS0)
- SmartFilesystem 1.286 (SFS2)
- JXFileSystem 4.34 (JXF4)

My tests below were done using the standard CLI-command "RENAME".

When running the same tests on a classic Amiga, the result is ok.

Test 1)

old filename on disk: readme.txt

old filename in parameter list: README.TXT

new filename in parameter list: README.TXT

=>Result (RAM): Wrong. Filename was kept unchanged (should have been README.TXT)

=>Result (other filesystems): Ok. Filename was changed to README.TXT

This test was done typing in the following from my shell:

```
rename from=README.TXT to=README.TXT
```

Test 2)

old filename on disk: readme.txt

old filename in parameter list: README.TXt

new filename in parameter list: README.TXT

=>Result: Ok (all filesystems). Filename was changed to README.TXT

This test was done typing in the following from my shell:

```
rename from=README.TXt to=README.TXT
```
