Damn ..my USB stick and external HD don't work at all under Update 2! now I get a read error on both devices..ARGHHH!!

Hmmm. . . I haven't tried the external hard drive I have since installing update 2. Haven't tried the Canon PowerShot S2 IS via USB cable yet either.

But there are 5 or 6 USB sticks here ranging from 512MB-8GB that all seem to work OK. They're all formatted in FAT so I can carry files back and forth from Ami to Windoze.

My generic card reader works great still with the SD cards from the above Canon camera.

An older HP scanner was recognized on USB, and CygnusEd's Sane backend in AmiCygnix would have worked, but it turned out the mechanicals on the scanner were shot.

(A1-XE with DMA and USB fixes from Revanche)
