Thanks devs. Its nice to see the first public beta. I will not comment too much on bad things as i know its beta and everything is written in the readme. But its nice to have it here and can actually try out firefox on my miggy for the first time.

Im writing here right now with it :)

Couldnt test to login on some sites as i cant use the (at) sign. I cant copy/paste either.

Thanks. Will watch for updates :) And ofcourse donate soon.
