i can do nothing since i cannot compile OWB anymore and so i cannot test the plugin for example.

OS4 sources version lacks the CMake AmigaOS4 that one day was there..

MOS sources maybe could be simply to compile (as Fab said) if you use MorphOS as platform but of course needs a lot of time to change the os4 part and for bugfixing and i have no time at all.

It is possible that there is no one that want to try to compile it?
