Another question to Joerg:

Is there anything we can do to help out in general? I don't have coding skills, and I'm currently unemployed, so the financial side is a bit iffy.

For what it's worth: I have OWB on both MorphOS and AmigaOS 4.1, and while it's true that OWB feels like more native on MorphOS due to the amount of interface integration, I find that OWB on AmigaOS actually works better. It often loads sites faster than my significantly faster Mac Mini (I have a Sam440ep) and sites tend to work better than on MorphOS.

As an addition: I'll most likely keep using OWB even when Timberwolf is done. I like the performance on webcore-based browsers, and I don't need the plug-ins for Firefox.

In fact I'd be perfectly happy if I had the ability to add bookmarklets, so I could use lastpass.com from OWB.
