@Joerg

I reply here as old thread was locked 😞

First of all that discussion wasn't born to blame anyone, we talked about software not people but I have to say sorry if that offending Joerg or anyone here, this wasn't my intention really ...

Quote:

- I implemented support for downloads myself in the AmigaOS 4.x OWB, before the download code from the AROS author was added to the OWB SVN.

Ok, so i'm wrong here too, sorry again, it seems I was bad informed here ...

Quote:

Since most people seem to think the AmigaOS 4.x port of OWB it's useless crap I guess I wont waste my time on it any more.

Reading this site it seems the opposite, most people seems appreciate ... but to be clear I **never** say that your software is "crap" or somethings similar, I just say that current release doesn't cover my need, maybe I be a bit rude but this doesn't change the concept, then I asked if someone can be able to port another one, that's it ... by the way continuing discussion is a non sense, hopefully you can change idea about dropping the OWB support, this was not my intention at all ...

Peace, if you accept ...
