The best way to support Joerg would have been to NOT restart the locked thread, by not quoting the old one 😞. IMHO this thread should be locked, and a new one started that is more clearly "how we help joerg" not "and this is what people were whining about" (that allows people to re-start the locked-thread issues).

BTW, is the source code to OS4's port of OWB fully available? If yes, then anyone else can theoretically look at adding stuff.
