Silly idea:

A bounty for the fusion of AOS4+AROS+MOS OWB.

It would/could bring OWB developers together to merge their doings to one combined browser.

Once the same code compiles for all flavours, the bounty would be given (split) to all three origins.

@Hans

So ... after reading some info ... GStreamer could enable some non-linear video editing tool to be ported as well... interesting...

@Joerg

So far I have used only OWB and IB on my AOS4 box. So, please continue!
