Yes I've heard that and understood it too...

I think you're just covering the bases in this regards because Hans brought uup the C++ scenario and also, it's not always that difficult to unlearn something if you remember why its done this way now (given these circumstances) and if you have a mind built on acceptance (not so much linear reasoning) then it could be even fun to have to remember where this is now relevant and then it isn't 😊

I will stick with plain ANSI C...

and I am certainly not going to program for any other platform in my lifetime...

I'm 43 now... I hope to have a suitable understanding of the C language by the time I'm 45... then I hope to be able to program suitably for AmigaOS specifically coming up to 50... then I hope to program for 20 years with a useful place somewhere in the world of AmigaOS programming LOL

That might be generous amounts of time? but I'm in no hurry 😊
