@Rigo

wasnt there some interest in porting that V program? Vanguard or Valgrind or electric fence or something of that nature...

maybe a real debugger wouldn't be a bad idea at all? I mean what kind of choices do we have? I've even heard some people still use SAS/C because it has a good debugger...

I'm here to motivate you Rigo 😊

@ssolie

The delivery is as important as how the question is constructed, only an intellectually impaired individual would overlook paying attention to this aspect

yes I guess by making that statement I am calling alot of people intellectually impaired LOL

@tonyw

thanks for your pointers
