@jabirulo

Absolutely, Akiko's problem is the same as yours. I can't stress enough to use the Installer script rather than installing by hand. The .info files are there for a reason; NetSurf relies heavily on MIME types and without the icons it won't see the CSS files as CSS.

@jahc

Not until NetSurf 5. See http://wiki.netsurf-browser.org/Development_Plan

Your guess on timescales is as good as mine, but I'd say April 2013 at the absolute earliest (based on one major release every year in April)
