Because some ppl are ask in mail for giving them all that working configs, i assume that better if it will upload it for everyone who lazy enough for boring with it. So, [there is all the configs](#).

Games for now are that ones:

AladdinAGA

ChaosEngineAGA

CoolSpot

Gods

KidChaosAGA

LionKingAGA

Ruff&Tumble

ShadowOFTheBeast 3 AGA

SlamTilt Pinball AGA

SuperForg

SuperStardustAGA

They all setuped to works in window mode (i not bother with fullscreen), without ugly black-borders, size of windowses i found manually (the best ones). Configs are done for WHD games only (pretty possible that with adfs/dms you will have problems), and the keyboard navigation done via numpad (when numlock are enabled). Also all of this tested on the 1GHZ of cpu (peg2) with latest EUE and OS4.1u2. All games playable, without jerkenes and so on.
