Check if theres an assign called CDDB: on your system. If not, create it (use a senseful place to store the cddb data, RAM: is not a real good place for this 😊).

After that, and if your machine is connected to the Internet, some info will be retrieved and stored to the "local cache" of cddb.library.

Oh, and check, if cddb.library exists on your system. If not, get it from Aminet (and the "glue code" addition for usage with OS4+).
