What's the best file system for AmigaOS 4.x?

URL:

Trying to understand the pros and cons of the various file systems that can be used under AmigaOS 4.

Obviously, correct me if I'm wrong, but the boot partition must be always SFS, right?

Also what about XJFS, is it reliable? Can we use it without any risk?

Is there a comparison table to check all those file systems available?

Are there any other alternatives we can try?

Sorry for the so many questions.
