2 hard drives, 23 partitions: 3 * SFS0, 10 * JXFS, 1 * DOS\03, 1 * SWAP, 6 * FFS2, 1 * (Linux) LNX + 1 * (Linux) SWP

SFS0 for booting, DOS\03 for classic Amiga stuff to use on EUAE, FFS2 for backups (haven't bothered to change), JXFS for everything everyday usage and productivity usage, plus swaps and one Debian partition. Max. partition size currently used is around 64GB (no room for bigger ones).

Wasn't JXFS the only one supporting some new DOS features like fast directory reading ?
