One thing I noticed since installing JXFS is the HD seems much noiser than before, let me know if you notice a similar change? Also wonder if the extra CPU overhead is worth it.

It's worth pointing out that you need to set the blocksize to 512 when you choose JXFS as the filesystem in MediaToolbox, otherwise the drive won't be mounted.

Anyone know what is the best blocksize for SFS\02, noticed my Workbench partiion is 2048, while AmiCygnix is 1024? not if that was by accident or design now. 😊
