@all

Many things that need more browser specific work were decided to get fixed after the new site is online, because we should get rid of the temp website as soon as possible. We tried to make all the necessary work to make it run fine as it is created by the Xoops team, with the old data in it.

The second thing that we had in mind was to not change a single line of code, because whenever we will have to make an update, then the changes will be overwritten. Whatever we did with the theme was done in a way to keep the xoops cms intact.

From now on we are going to make additions to the website and make it full compatible with the most of the amiga browsers. We didn't want to lose time for fixing those issues first.

@Chris

Be sure that really soon my beloved NetSurf is going to be supported totally... I just need some time. :D
