Hi 😊

i was looking for a free text editor for my pc and i remind myself about vim the editor 😊 . When clicking on the download section of the vim site i discovered that already exist an amiga version but unfortunatly this one was outdated. The PC version is dated 2010-08-15 while the amiga version is dated 30 Jul 07. On os4depot there is also another amiga version but it requires the server X11. Is it possible to update the existing native version for the new Amiga OS 4.1 Update 2?
