@CrhisH

Earth2140 a bit outdated for today, and Napalm are better (and by playability, and by feels, and by even graphics). While its 256cols, its still looks a bit better than earth2140.

ps. As i know, NallePUH not works on latest OS4s (i.e. it runs, but do nothing).

@carvedey

You also can try (if you did not want Napalm only): [Warzone2100](#) (fast, with good playability, free and native). By the "feel" its almost the same as napalm. Different graphics of course, but still.

And FPSE emulator in which you can play old good Command & Conqueror (still not so native of course, but plays fast and fine).
