Thank you very much for all your help and suggestions!

Unfortunately I still couldn't get it to work

I tried all you mentioned - in addition I tried to uncomment some usb stuff in kicklayout but that doesn't help either!

I will now try the hyperion message boards - I signed in an Hans-Jörg Frieden has just activated my account.

I hope they can help me - I really like to try out MUI OWB an the upcoming Timberwolf - and I think for these gimmicks Update3 is a pre-condition.

If I can't make it in anyway I will do a fall-back to Update2 - hope this willt not be necessary for the future!

BUT - I never will stop using AmigaOS 4.x !!!!

Thanx a lot so far guys!

See you on AMIGAOS !!!

Andi
