Hello,

1. Logitech mouse M505 work fine with update3 or 4.

That mean there are no reason to see other range of logitech M series mouse not working with AOS4.

This mouse is a cordless one with an unify dongle. Maybe all unify Logitech hardware (keyboard for example), work fine also.

this mouse use a verry high resolution that mean you could cover all the screen with a verry small movement of the hand. strange first seconds but great after some time of use.

2. OCZ Rally2 16go stick work fine (FAT formatted).
