USB Devices that work on SAM Flex 800MZ OS4.1u4:

Microsoft Wireless Mouse 5000

Panasonic Lumix FZ150 camera:

PTP picture transfer through USB connection works.

Direct USB access of camera SD memory card as massstorage device works.

HP Photosmart Premium all-in-one (C410 series) printer:

USB Flash drives and SD cards plugged into printer show up on computer as massstorage devices.

Scanning pages works by scanning to memory device (like Flash drive) and accessing the scanned image from the computer.

Direct scanning with Amiga scan programs untested.

Printing works but there are some driver issues. First page of multi-page text document has an extra line in top margin. An additional reset command is necessary to properly terminate a print job. Graphics printing from some programs is ugly dithered image or doesn't work. Images can be sent to printer memory device and printed from printer control panel, but with little control over size of printed image.

Working USB flash drives:

Sony MicroVault 1GB (FAT)

Kingston DataTraveler 4GB (FAT)

Sandisk Cruzer 16GB (Formatted with SFS)

Sandisk Cruzer 32GB (FAT)

PNY Attache 16GB (FAT)

Memorex Datatraveler 8GB (FAT)

NOTE: Occasional problems with large nested directory data writing to all FAT formatted flash drives. SFS formatted flash drives are much more reliable for file writing.
