Hi Diego,

Is MP4/FLV supposed to work at 100% with this library ?

I have some MP4/FLV files downloaded from YouTube using KeepVid client as online converter

<http://keepvid.com/>

All my files downloaded from that are in "normal quality" But once i try to open them with DvPlayer i got all sound and video trashed ... luckily i didn't got any crash and this is a good step forward compared to the past (before the entire DvPlayer GUI was freezed when i try to open such video files)
