Just remove/rename the old lib, i used the following script:

```
IF Exists LIBS:avcodec.library_51.52
  RENAME LIBS:avcodec.library LIBS:avcodec.library_53.1
  RENAME LIBS:avcodec.library_51.52 LIBS:avcodec.library
Else
  RENAME LIBS:avcodec.library LIBS:avcodec.library_51.52
  RENAME LIBS:avcodec.library_53.1 LIBS:avcodec.library
EndIF
```

avail flush >NIL:

No need to touch the libs:avcodecs folder since the new lib does not uses it.

BTW, I wanted to upload the archive name as "avcodec-53.1.lha" since there will be more than one lib (at least three) and i don't want to replace the old libs, but the admin renamed the archive. Also, the readme file through the web got all messed up - who should i contact about these issues?
