Good work !

Just downloaded and tried a little and after a few very quick test i can only say that's is a great improvement, F11 now work as expected for fullscreen and even download functionality seems ok, i also try to download files in RAM Disk: (with space) and all goes well !

It's also a bit faster and i don't think is a placebo effect, it's really faster 😊

Now i will look into the bugtracker in order to revisit by myself all problem marked as fixed, just to test if all other things marked as fixed is really fixed also on my system 😊

Just a minor issue for now:

In customize i try to placed the "stop" and the "reload" buttons near the other "left" and "right" buttons and then i press "done" (just to place all the 4 buttons in the same area) but after that the "stop button" was not placed at all, so i reopen again the "customize" and i changed the order of the stop and reload and then again i confirm it --> Now it show all the 4 buttons on the same area

Maybe still a little glitch here, need to test again of course

Testing continue 😊

BTW: Now i got 100% on acid test 3 again, only problem is that the small red X on top will be showed on the page, while it must not theoretically .. anyway 😊
