I just uploaded it to os4depot.net, so it should still be in the upload queue.

I've been running Timbertwolf start script from a shell but this time it wouldn't start because the S protection bit wasn't set. I'm not sure if it was the method of unpacking the archive or if it is archived that way. Nice work otherwise 😊

EDIT: When I quit Timberwolf after starting it from a shell it reports:
Command 'timberwolf-bin' returned with unfreed signals 1E000000!
